Demo 1: Introduction to Creating a Flow

In this instructor-led demo, we will walk through the basics of Power Automate by creating a simple **instant cloud flow**. The flow will be manually triggered and use the **MSN Weather connector** to fetch current weather for a specified location. We'll also show how to view outputs in JSON format and send yourself a Teams message using the 48:notes trick.

Objectives

After this demo, participants will be able to:

- Identify the different types of flows in Power Automate
- Create and manually trigger a basic cloud flow
- Add and configure connectors and their actions
- Authenticate connectors during flow setup
- Interpret JSON output from flow actions
- Use 48:notes to send a Teams message to themselves

Estimated time to complete this lab

20 mins (Demo Only)

Task 1: Understanding Flow Types and Connectors

1. From the [Power Automate homepage](#), click **Create** from the left navigation.

2. Review the types of flows:

- **Automated cloud flow** – triggered by external events
- **Instant cloud flow** – manually triggered
- **Scheduled cloud flow** – runs on a timer
- **Desktop flow** – for RPA use
- **Business process flow** – guides business users through processes

Start from blank ⓘ

3. Select **Instant cloud flow**, name it "Weather Demo Flow", and choose **Manually trigger a flow**.

Click **Create**.

(Optional) Task 2A: Add and Authenticate MSN Weather Connector

1. Click + **New Step**

2. Search for **MSN Weather** and select **Get current weather**

3. If prompted, Create connection, sign in and grant access to authenticate the connector.

4. In the **Location** field, enter any city name (e.g., "Singapore"), set units to "Metric".

The screenshot shows the configuration interface for the 'Get current weather' connector. At the top, there's a title bar with a sun icon, the text 'Get current weather', and a close button. Below this is a tabbed interface with 'Parameters' selected. The 'Location' field is a text box containing 'Singapore'. The 'Units' field is a dropdown menu set to 'Metric'. At the bottom, it shows 'Connected to MSN Weather.' with a 'Change connection' link.

5. Click **Save** to store the flow.

(Optional) Task 2B: Add and Authenticate Office 365 Profile Connector

1. Click **+ New Step**

2. Search for **Office 365 Users** and select **Get user profile (V2)**

3. If prompted, Create connection, sign in and grant access to authenticate the connector.

Create connection

 Get my profile (V2)

Create a new connection

Sign in to create a connection to Office 365 Users.

Sign in

Cancel

4. In the **Select Fields** field, enter the following mail, displayName, mobilePhone.

 **Get my profile (V2)** ⋮ ⏪

✔ Your flow is ready to go. We recommend you test it.

»

```
graph TD; A[Manually trigger a flow] --> B[Get my profile (V2)];
```

(Optional) Task 3A: Rename and Add Notes

1. Click title and you can rename the Card.
E.g., rename the action to Get Weather for Singapore

 Get Weather for Singapore

Parameters Settings Code view Testing About

2. Click on the **ellipsis (...)** on the step and select **Rename** Use **Add a note** to describe the step's function.
E.g., "Retrieves current weather using MSN Weather API"

 Get current weather

Parameters Settings Code view Testing About

Location *

 Get Weather for Singapore

 Retrieves current weather using MSN Weather API

Task 4: Test and Understand the Output

1. Click **Test**, choose **Manually**, and then **Save & Test, Run Flow, Done**.

Test Flow

Manually

Perform the starting action to trigger it.

Automatically

There are no runs for this flow.

Save & Test

Cancel

2. After the flow runs, expand the MSN Weather step.
You will see **Raw Outputs** in **JSON** format.

3. JSON (JavaScript Object Notation) is a structured way to store and transmit data using **key-value pairs**.

Example:

JSON:

```
{  
  "location": "Singapore",  
  "temperature": 30,  
  "condition": "Cloudy"  
}
```

This allows Power Automate to extract and use specific values like *temperature* or *condition*.

Get_Weather_for_Singapore

Get_Weather_for_Singapore

```
{  
  "body": {  
    "responses": {  
      "weather": {

----- **End of Task** -----

Exercise 1: Creating Your First Flow with Excel and Office 365 Connectors

In this hands-on exercise, participants will create an **instant cloud flow** that adds a new row to an Excel file stored in OneDrive. The flow will be manually triggered and use dynamic values such as the participant's profile information and current date.

Objectives

After completing this exercise, participants will be able to:

- Create and configure an Excel table in OneDrive
- Build a manually triggered flow using Power Automate
- Use the **Excel Online (Business)** and **Office 365 Users** connectors
- Populate Excel with dynamic values using flow expressions
- Format dates using the `formatDateTime()` function

Estimated Time

40–50 mins

Task 1: Creating an Excel Table in OneDrive

1. Go to **OneDrive for Business** and create a new Excel workbook.
Click **+Add New > Excel Workbook**

2. Inside the workbook, create the following columns:
Date, Display Name, Mail, Comments

	A	B	C	D	E	F
1						
2						
3		Date	Display Name	Mail	Comments	
4						
5						

3. Select the data and insert a table via **Insert > Table**
Ensure **"My table has headers"** is checked

4. Rename the file (e.g., MyFirstExcel.xlsx)

5. (Optional) Click inside the table, under the Table Design Tab and rename it from Table1 to something meaningful (e.g., UserComments)

Task 2: Creating a Manually Triggered Flow

1. Go to Power Automate and click **Create > Instant cloud flow**

2. Name your flow: **MyFirstFlow**

Choose the trigger: **Manually trigger a flow**, then click **Create**

3. Click **+ New Step**, search for **Excel Online (Business)**, and choose **Add a row into a table** (Note: Sign in and create connection if it is the first time)

Add an action

6. Click **Save** and **Test** the flow. Confirm a row is added to your Excel file.

Date	Display Name	Mail	Comments
2025-06-16T06:41:04.9696901Z			Submitted via Flow

Task 3: Using Office 365 Connector for Dynamic Data

1. Add a new step between Trigger and Excel action: search for **Office 365 Users** and select **Get my profile (V2)**

2. Return to your Excel step and update the fields:
 - **Display Name** → Use dynamic content Display Name
 - **Mail** → Use dynamic content Mail

Date

Display Name

Mail

Comments

3. Improve the **Date** format. Replace `utcNow()` with:
`formatDateTime(utcNow(), 'd-M-yyyy')`

This shows the date in a readable format.

Date

 formatDateTime...

----- End of Task -----

Exercise 2: Sending Teams Messages Using Excel Data

In this exercise, you'll retrieve data from the Excel table created in **Exercise 1** and send that information to yourself via **Microsoft Teams**. This helps reinforce using dynamic content, working with connector outputs, and understanding loop behavior when multiple rows are involved.

Objectives

After completing this exercise, participants will be able to:

- Retrieve rows from an Excel table using Power Automate
- Use dynamic content from Excel in downstream steps
- Send a Teams message to themselves using 48:notes
- Understand how **Apply to each** is triggered when dealing with multiple rows
- (Optional) Format the data into an HTML table for cleaner presentation

Estimated Time

30–40 mins

Task 1: Create a New Flow to Retrieve Excel Data

1. Go to Power Automate and create a new **instant cloud flow**, Name it: **MySecondFlow**
Choose **Manually trigger a flow**, then click **Create**

Flow name

Choose how to trigger this flow *

☒	 Manually trigger a flow Flow button for mobile	
☐	 When Power Apps calls a flow (V2) Power Apps	
☐	 When an agent calls the flow Skills	
☐	 When Power Virtual Agents calls a flow Power Virtual Agents	
☐	 When a flow step is run from a business process flow Microsoft Dataverse	
☐	 When a row is selected Microsoft Dataverse	
☐	 For a selected message (V2) Microsoft Teams	

2. Add a step: **List rows present in a table** from the **Excel Online (Business)** connector

 List rows present in a table  

Parameters Settings Code view Testing About

3. Select the Excel file and table you created in **Exercise 1** (e.g., *MyFirstExcel.xlsx* and "UserComments" table)

Location *

Document Library *

File *

Table *

4. Save and test the flow to confirm rows are being retrieved

----- End of Task -----

Exercise 3: Automating Approvals from Microsoft Forms

In this exercise, participants will build an **automated flow** that is triggered by a Microsoft Form submission. The flow will send an approval request, and based on the outcome, a Teams message will be sent to the requester. This introduces the **Approvals connector**, conditional logic, and reuses the 48:notes technique from earlier exercises.

Objectives

After completing this exercise, participants will be able to:

- Create an automated flow triggered by a Microsoft Form
- Use the **Start and wait for an approval** action
- Receive and respond to approval requests via Teams and email
- Add conditional logic based on approval outcome
- Send Teams notifications to themselves using 48:notes

Estimated Time

40–50 mins

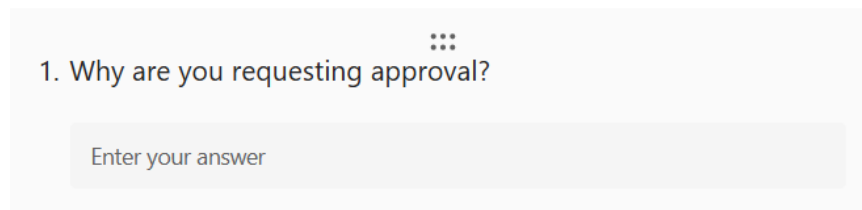

Task 1: Create a Microsoft Form

1. Go to **Microsoft Forms** and click **New Form**

2. Name the form: **Demo Form**
3. Add a **single text question**, e.g.: "Why are you requesting approval?"

Demo Form

The screenshot shows a preview of a Microsoft Form titled 'Demo Form'. It contains a single question: '1. Why are you requesting approval?'. Below the question is a text input field with the placeholder text 'Enter your answer'.

Task 2: Create an Automated Approval Flow

1. In Power Automate, go to **Create > Automated cloud flow**
2. Name the flow: **MyThirdFlow**

Choose trigger: **When a new response is submitted (Microsoft Forms)** Click **Create**

The screenshot shows the 'Create a flow' dialog in Power Automate. The 'Flow name' field contains 'MyThirdFlow'. Below it, the 'Choose your flow's trigger' section shows a list of triggers. The first trigger, 'When a new response is submitted (Microsoft Forms)', is selected with a blue checkmark. Other triggers include 'When an item is created (SharePoint)', 'When an item is created or modified (SharePoint)', 'When a file is created (OneDrive for Business)', 'When a task is assigned to me (Planner)', and 'When a feed item is published (RSS)'. At the bottom right, there are three buttons: 'Skip', 'Create' (highlighted in blue), and 'Cancel'.

3. In the trigger step, select the Demo Form created earlier

 When a new response is submitted ⋮ ⏪

Press '/' to insert dynamic value or expression

3. Click **Save** and test by submitting the form

You should receive:

- A **Teams notification**
- An **email** with Approve/Reject buttons

The screenshot shows a mobile app interface for 'Approvals'. At the top, there's a header with a circular icon and the text 'Approvals' and 'Approval request details'. Below this is a 'Requested' status bar. The main title is 'Approval Request - Demo Form'. Underneath, it says 'Form Submission Details: Testing how approval works'. A section titled 'Status: Requested' shows a flow: 'MA Pending response MOD Administrator' followed by 'MA Requested by MOD Administrator'. To the right of this, the date and time '6/16/2025, 3:46:22 PM' are displayed. Below the status section is a 'Comments' area with a text input field labeled 'Add your comments here'. At the bottom, there are three buttons: 'More actions' with a dropdown arrow, 'Reject', and 'Approve'.

The screenshot shows an email notification from 'Approvals | Power Automate'. The subject is 'Approval Request - Demo Form'. The body text includes: 'Requested by MOD Administrator <admin@M365x08449821.onmicrosoft.com>', 'Date Created Monday, 16 June 2025 3:46 pm', and 'Form Submission Details: Testing how approval works'. Below this text are two buttons: 'Approve ^' and 'Reject v'. Underneath these buttons is a 'Comments' section with a text input field labeled 'Enter comments'. At the bottom of the comments section is a 'Submit' button. At the very bottom of the email, there is a small footer text: 'Get the Power Automate app to receive push notifications and grant approvals from anywhere. Learn more. This message was created by a flow in Power Automate. Do not reply. Microsoft Corporation 2020.'

Task 4: Add Conditional Logic

1. Add a **Condition** control

Set the condition: is equal to Approve

The screenshot shows the 'Condition' control configuration in Power Automate. The control is titled 'Condition' with a scale icon. Below the title are tabs for 'Parameters', 'Settings', 'Code view', and 'About'. The 'Parameters' tab is selected. The 'Condition expression' section is active, showing a visual builder. It starts with an 'AND' operator, followed by a checkbox, then a field 'Outcome' with a refresh icon and a close button, followed by the operator 'is equal to', and finally the value 'Approve'. Below this, there is a '+ New item' button.

2. In the **If yes** branch, add:

Microsoft Teams → **Send message in a chat**

- Recipient: 48:notes
- **Message:** "Your request has been approved!"

The screenshot shows the 'Post message in a chat or channel' action configuration in Power Automate. The action is titled 'Post message in a chat or channel' with a Teams icon. Below the title are tabs for 'Parameters', 'Settings', 'Code view', 'Testing', and 'About'. The 'Parameters' tab is selected. The 'Post as' field is set to 'User'. The 'Post in' field is set to 'Group chat'. The 'Group chat' field is set to '48:notes'. The 'Message' field contains the text 'Your request has been approved!' and a 'Response summ...' button. The message field has a rich text editor toolbar with options for text color, font size, bold, italic, underline, link, unlink, and code.

3. In the **If no** branch, add a similar message:

 Post message in a chat or channel 1 ⋮ ⏪

Task 5: Test and View the Outcome

1. Open the Demo Form and submit a sample response

Demo Form

Hi, MOD. When you submit this form, the owner will see your name and email address.

1. Why are you requesting approval?

2. Check your email and Microsoft Teams — you should receive an **approval request**
