

Introduction to Power Platform Plan Designer

Power Platform Plan Designer

AI-Driven Solution Design

Plan Designer uses AI to convert natural language inputs into structured business solution plans quickly and effectively.

Collaboration Between Developers

Enables citizen and professional developers to collaborate through a shared blueprint for cohesive solution architecture.

Accelerated Digital Transformation

Speeds up application development and prototyping without deep technical expertise, fostering innovation and governance.

Consistent Solution Architecture

Ensures alignment of data, apps, processes, and analytics maintaining governance and structured environments.

What is Plan Designer?

Conversational Interface

Plan Designer uses AI to convert business requirements into detailed technical blueprints through a conversational interface.

Flexible Input Context

Users can add diagrams, screenshots, and documentation that help generate tailored and accurate design outputs.

Iterative Collaborative Design

The system supports continuous refinement, enabling stakeholders to collaborate and improve the plan dynamically.

Learning and Simplification

Plan Designer educates new users on component integration, simplifying the design phase for diverse users.

What Does It Generate?

User Roles and Permissions

Plan Designer generates distinct user roles and permissions to represent stakeholders such as employees, managers, and administrators.

Data Model Creation

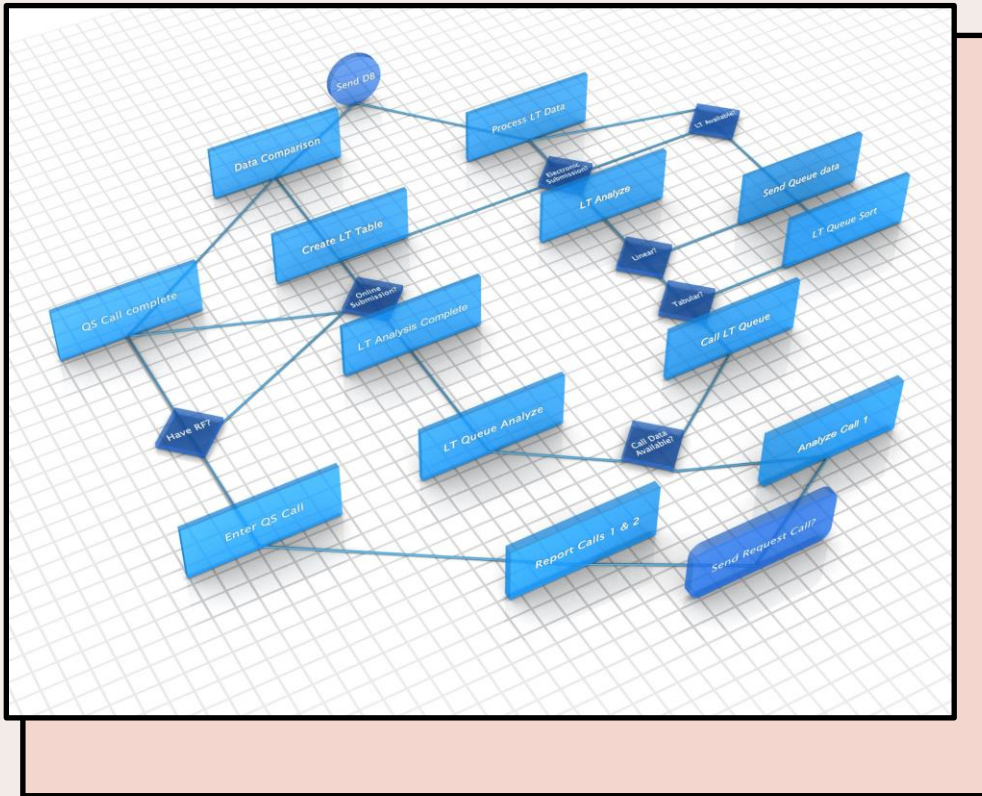

It automatically creates a structured data model using Dataverse tables to organize and manage application data effectively.

Application Frameworks

Power Apps frameworks including canvas and model-driven apps are generated, providing user interfaces for solution interaction.

Automation and Analytics

Plan Designer generates Power Automate flows for business processes and Power BI reports for analytics and insights.

Key Benefits

Accelerated Solution Design

Plan Designer reduces design time from weeks to minutes, enabling rapid experimentation and selection of viable solutions.

Low Technical Barrier

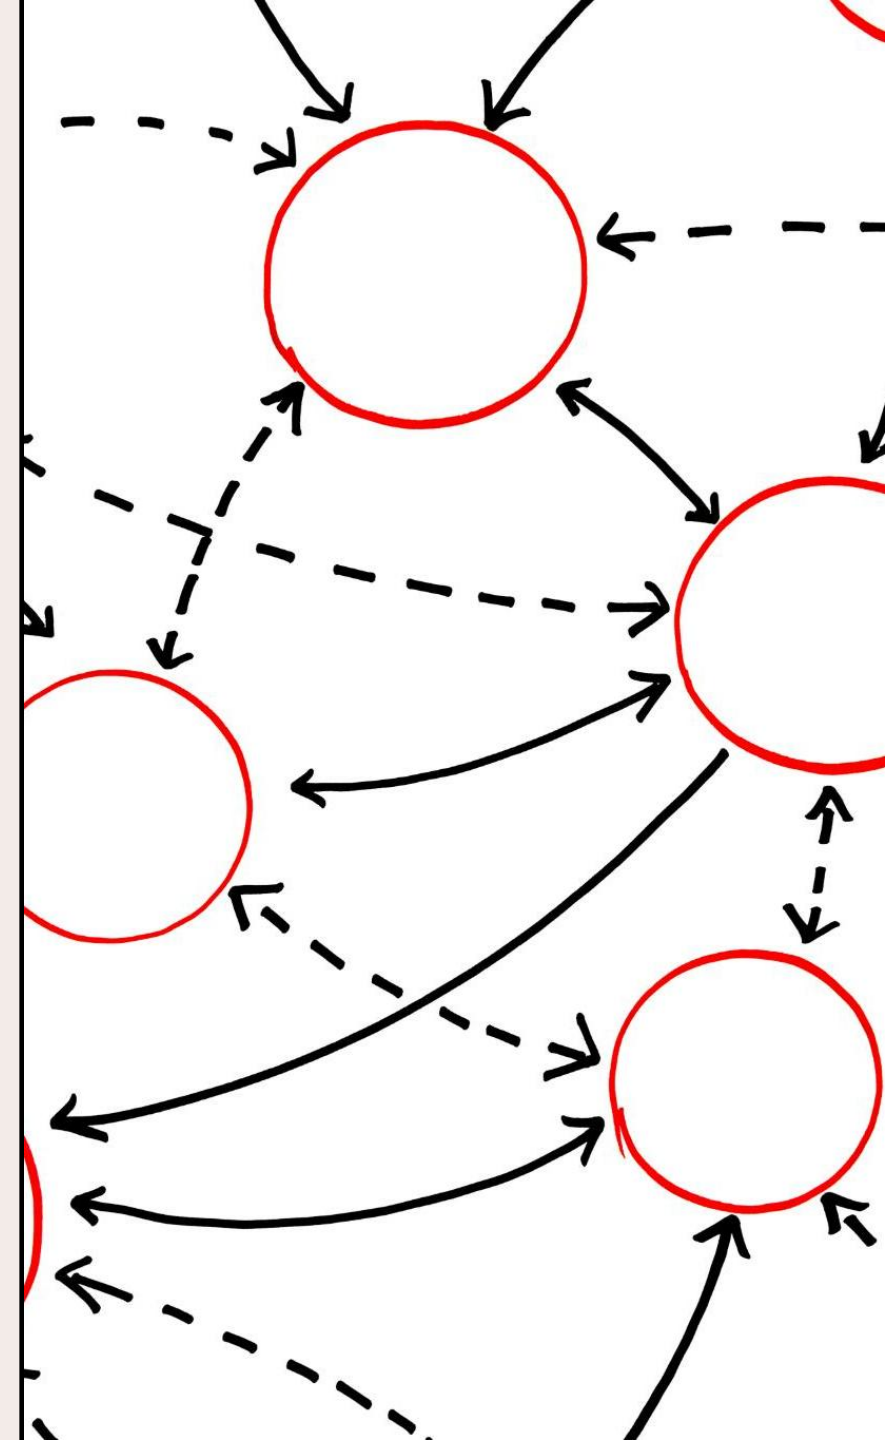

Accessible to users with little or no coding experience, empowering broader participation in digital transformation.

Unified Solution View

Provides a clear overview of data, apps, automation, and analytics improving collaboration between stakeholders and developers.

Easy Iteration and Documentation

Supports continuous updates and serves as living documentation, aiding onboarding and system maintenance.
